**Subject:** Invitation as a Faculty for MENTCON 2019

**Dear Dr Supriya Kokane ,**

Greetings!

It is our pleasure to invite you to participate as a **Faculty** in our forthcoming meeting **MENTCON 2019 (51st Maharashtra State ENT conference 2019)** which is going to be scheduled from 28 november 2019 to 1 december 2019 **at MGM medical college, Aurangabad.** We are sure your presence will add great value to the meeting.

Kindly see below the session details:-

**Day 3 - 30/11/2019**

05:20 pm to 06:10 pm	Special Invited Talk session	
	Devgiri Hall (Hall 3)	Cosmetic Surgeries for ENT surgeon ( 12 min)

**Please note conference registration is must to attend the conference, therefore we request you to please do the same, if not done yet. You can do the same through online by visiting [www.mentcon2019.com](http://www.mentcon2019.com)**

With your participation we are well on the way to making the MENTCON 2019 a resounding success.

**For any further clarification please feel free to contact us**

With kind regards,

# ANTIBIOTICS PRESCRIPTION PRACTICE IN PEDIATRIC WARDS SETTING IN A TERTIARY CARE HOSPITAL

DR RISHABH SHAH, DR NEHA KUMBLA, DR VIJAY KAMALE  
DEPARTMENT OF PAEDIATRICS, MGM HOSPITAL KAMOTHE, NAVI MUMBAI.

## INTRODUCTION

Antibiotics are commonly prescribed drugs in pediatrics, causing an overall rise in health care costs, there is lack of uniformity in drug prescribing and the emergence of antibiotic resistance.

## AIMS AND OBJECTIVES

1. To study number of medicines per patient.
2. To study number of antibiotics per patient.
3. To classify antibiotics use according to diagnosis.
4. To check Accountability and antibiotics review.

## MATERIALS AND METHODS

- Prospective study -3 months duration
- Inclusion criteria : 1 month to 18 years
- Exclusion criteria : children expired within 24 hours
- Total : 107 patients who were started on antibiotics.

## RESULT

Average number of medicine - 5  
Average number of antibiotic - 2  
Respiratory & GI infections were commonest, Professors advised considered in maximum children  
Compatibility with national guidelines was 70-80% (2016 MOHFW, GOI)

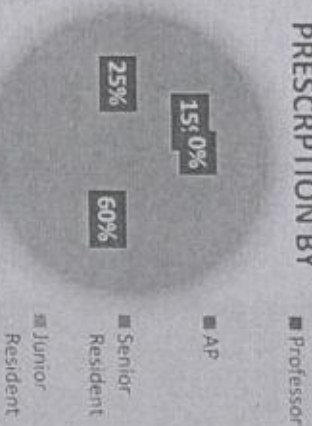

## CONCLUSIONS

According to our study, in medical colleges, not many number of drugs and antibiotics are prescribed for inpatient children. The compatibility to National Antimicrobials Policy is also satisfactory, but needs further improvement.

**SPECTRUM OF NEURO-TUBERCULOSIS IN CHILDREN IN A TERTIARY CARE CENTRE  
M.G.M MEDICAL COLLEGE KAMOTHE, NAVI MUMBAI**

Presenting Author: Dr. Vishal V. Jali  
Co-Author: Dr. Prayanka Amopkar, Dr. Sneha Panchal, Dr. Sitanshu Khareche, Dr. Vijay Kamal, Dr. Jyotendra Chaturvedi

**INTRODUCTION/AIMS**

Neurotuberculosis is the most severe form of extrapulmonary TB with a predilection to affect children. Childhood TB constitutes 10-20% of all TB cases in India causing 8-20% of TB related deaths. 25% of Pediatric TB cases are Extra PTB with TBM being the most common cause of death. Widespread Vaccination of children with BCG has lead to change in the natural course of Neurological TB as well as its clinical manifestations. Tuberculous Meningitis is the commonest form of NeuroTB seen amongst children. It is highly associated with Neurological disability and Mortality.

Aim of this study is to illustrate the clinical profile of children with Neurotuberculosis

**METHODS**

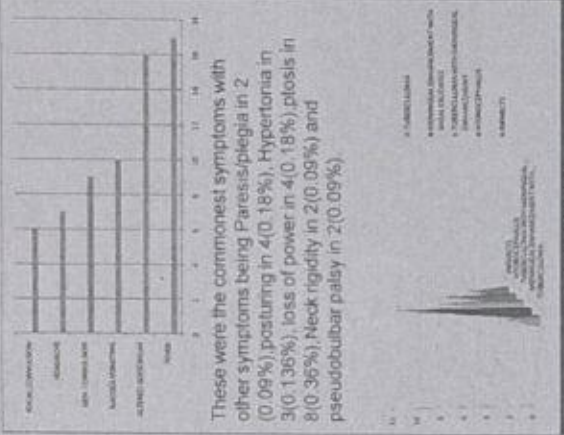

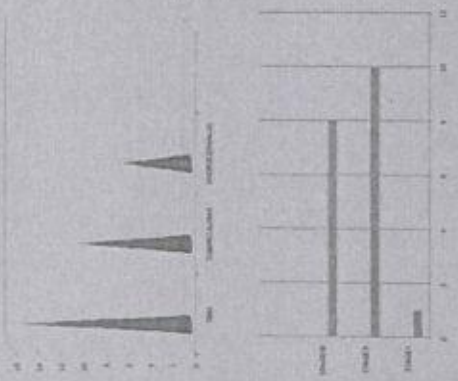

The medical records of patients diagnosed with Neurological tuberculosis hospitalised at MGM Hospital Kamotho over a period of 1 year between September 2018 & August 2019 were studied retrospectively.

Inclusion Criteria: All children between 0-18 years of age diagnosed with Neurotuberculosis on Bacteriological/Radiological ground.

**RESULTS**

- Total Number of patients included 22
- Median age was 3 years(8 months-7years)
- Male:Female ratio of 1:1.44
- Moderate malnutrition was seen in 11(50%), severe 6(27.2%)
- Hyponatremia was seen in 18(81.8%) cases
- Mantoux was positive in 7(31.8%)
- CXR showed evidence of TB in 3(13.6%)
- CBNAAT was positive in 4 cases(Caputium, 2CSF)

- No AFB were seen
- Rifampin resistance was seen in 1(4.5%)
- Amongst TBM cases: CSF showed pleocytosis(>20/mm3) with lymphocytic predominance in 13(68.4%), protein>100 mg% in 14(73.6%), sugar <2/3rd of blood sugar in 13(68.4%). All three CSF findings were seen in 8(42.4%)
- Death occurred in 2(9%) patients

These were the commonest symptoms with other symptoms being Paralysis/plegia in 2 (0.09%), posturing in 4(18%), Hypertonia in 3(13.6%), loss of power in 4(18%), plotsis in 8(36%), Neck rigidity in 2(9.09%) and pseudobulbar palsy in 2(9.09%)

**DISCUSSION**

Neurotuberculosis is a serious burden on the health-care system in India. The disease has been known to occur in different age groups but has maximum incidence in the first 5 years of life according to the current medical literature. In this study, the mean age at presentation of the disease was found to be 3 years, and the maximum number of cases (9 cases [40.9%]) were seen in the age group of 2-5 years which is similar to a study conducted in Tertiary hospital in western India(1). [Median age 3.4 years and 65.22% in the same age group] Protein-energy malnutrition (PEM) was present in 77.2% [84.78% in a similar study] with maximum cases having Grade II(50%) and Grade III(27.2%) PEM. A negative tuberculin test (Mantoux test) was seen in 15(68.1%) & 35(76.08%) cases in a similar study.

On neuroimaging, Hydrocephalus was seen in 7 (31%) and Meningeal enhancement with basal exudates in 12(54.5%), Tuberculoma in 3(13.6%) and Tuberculoma with meningeal enhancement in 8(36.3%) and infarcts in 4(18.18%) which is in contradiction to a similar study where Hydrocephalus was seen in (47.83%), basal exudates (26.09%) & tuberculoma(23.91%). Neuroimaging is highly effective in establishing the diagnosis of neurotuberculosis and should be carried out on admission in any patient with clinical suspicion of the disease. 13.6% had a primary focus of infection in the lung on chest X-Ray which was 26% in a similar study.

**CONCLUSION**

The most common form of Neuro Tuberculosis is Tubercular Meningitis affecting children of the age group 2-5 years with predilection to Females who are Moderately Nourished & presented with Stage II TBM. Diagnosis is usually made on Radiological ground followed by clinical ground and is less likely on Bacteriological ground in children.

Despite newer molecular tests, microbiological diagnosis remains difficult in Neurotuberculosis. The presentation of pediatric TBM in advanced stages possibly contributes to its poor outcome. Strategies for early diagnosis and initiation of treatment may be the key to preventing Neurological sequelae.

**INFANTILE VITAMIN B12 DEFICIENCY ANAEMIA: ATYPICAL EARLY PRESENTATION IN AN EXCLUSIVELY BREASTFED INFANT OF VEGETARIAN MOTHER.**

DR PARTH DESAI, DR PRAVI JAIN, DR KUNAL BARUA, DR SUHAS KHARCHE, DR BAGESHREE SETHI, DR JEETENDRA GAVHANE, DEPT. OF PAEDIATRICS, MGM HOSPITAL KAMOTHE, NAVI MUMBAI.

**INTRODUCTION**

- VIT B12 DEFICIENCY IN INFANTS IS AN IMPORTANT CAUSE OF MORBIDITY AND MORTALITY.
- EARLY TREATMENT CAN PREVENT POTENTIALLY DEVASTATING NEUROLOGICAL AND DEVELOPMENTAL SEQUAE.
- CLINICAL FEATURES DEPENDS ON SEVERITY OF DEF RATHER THAN CAUSE.
- PRESENTS BETWEEN 2-12 MONTHS OF AGE WHEN NEONATAL STORES ARE DEPLETED AND DIETARY B12 IS INADEQUATE.
- CLINICAL FEATURES INCLUDE POOR FEEDING, WT LOSS, IRRITABILITY GLOSSITIS, INFECTION.

**CASE REPORT**

4 MONTH OLD MALE CAME WITH C/O:  
 - FAST BREATHING  
 - DECREASED ACTIVITY  
 - REFUSAL TO FEEDS SINCE 2 DAYS

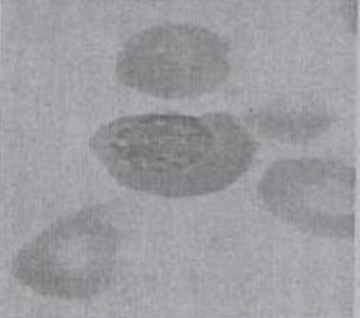

**ON EXAMINATION:**

- TACHYCARDIA
- TACHYPNOEA
- SIGNS OF CCF:
- GALLOP +
- HEPATOMEGALY
- SEVERE PALLOR

**INVESTIGATIONS**

- CBC : HB 2.8 TLC 16170  
 MCV-108 PCV- 10.4 PLT- 1.13  
 -HPLC: NORMAL  
 -IRON STUDIES: NORMAL  
 -VIT B12 : VERY LOW (69.6PG/ML)  
 -PERIPHERAL SMEAR : DIMORPHIC ANAEMIA, LOW RETIC COUNT, 'MACROCYTOSIS, HYPERSEGMENTED NEUTROPHILS'

**TREATMENT**

AS HB WAS LOW PATIENT WAS TRANSFUSED WITH PRBCS.  
 PATIENT WAS STARTED ON VIT B12 @1000 MCG/DAY ALONG WITH OTHER SUPPLEMENTS.  
 HENCE, MOTHER WAS ALSO INVESTIGATED S/O VERY LOW HB AND LOW VIT B12 AS A RESULT OF VEGETARIAN DIET. VIT B12 SUPPLEMENTATION WAS STARTED AND DIETARY COUNSELLING WAS DONE.

**RESULTS**

PATIENT DRASTICALLY IMPROVED POST B12 SUPPLEMENTATION AND MAINTAINED STEADY GROWTH ON FUTURE FOLLOW UPS.

**DISCUSSION/PREVENTION**

VIT B12 DEFICIENCY ANAEMIA IN INFANTS IN MOST CASES OCCURS DUE TO MATERNAL DEFICIENCY OF VIT B12 SPECIALLY IN VEGETARIAN MOTHERS.  
 HENCE ANY CHILD SHOWING FEATURES OF DEFICIENCY SHOULD BE INVESTIGATED AND TREATMENT INITIATED AS EARLY AS POSSIBLE.  
 TO PREVENT VIT B12 DEFICIENCY HEALTH CARE PROVIDERS CARING FOR PREGNANT OR LACTATING MOTHERS AND THEIR NEWBORNS SHOULD TAKE FULL DIETARY HISTORY AND CONSIDER THEIR VIT B12 STATUS.

**TITLE : TYPHOID - TYPHUS COINFECTION WITH UNCOMMON COMPLICATION**

Presented by: Harshita Shah, Disha Bhanushali, Purva Jain, Bageshree Seth, Revathi N, Vikram Patra  
 DEPARTMENT OF PAEDIATRICS, MGM MEDICAL COLLEGE, KAMOJHE

**INTRODUCTION**

- Typhoid fever is caused by *Salmonella typhi*, while typhus fever is a rickettsial infection.
- In both cases, the patients present with almost similar pattern of illness - prolonged fever, headache, malaise, myalgia & rash.
- Hepatic manifestations may be in form of fever, jaundice, tender hepatomegaly. Severe hepatic involvement with a clinical feature of acute hepatitis is a rare complication of typhoid fever.
- The documented incidence of cholelithiasis varies widely from less than 1% to 26% patients with enteric fever.

**COURSE**

- Patient's investigation showed borderline thrombocytopenia and direct hyper-bilirubinemia
- Mild elevation of liver enzymes (AST and ALT - 267 IU and 94 IU respectively).
- Dengue and Leptospirosis were ruled out.
- Injection Ceftriaxone was added.
- His fever continued and enteric progressively worsened with markedly increased direct hyper-bilirubinemia.
- The blood culture grew *Salmonella typhi*, sensitive to Ceftriaxone.
- Fever continued and hence azithromycin was added.
- Patient developed macular rash involving palms and soles. No eschar.

- On further investigations, OXK agglutination was positive on Weil Felix test, suggestive of scrub typhus.
- Doxycycline was added.
- Fever intensity and frequency decreased.

- The liver biochemistry subsequently showed decline of cholelithiasis with improvement of transaminases by day 10.
- He was discharged after antibiotic course. On follow up the icterus had markedly reduced and hepatomegaly and splenomegaly reduced. The liver biochemistry showed decreased direct bilirubin with normal enzymes.

**INVESTIGATIONS**

ID bill	4.92	5.49	6.59	3.14
SGPT	89	94	88	63
SGOT	267	297	190	107
ALP	355	390	446	489

USG abdomen - multiple enlarged lymph nodes and hepatosplenomegaly.

- BLOOD CULTURE - SALMONELLA TYPHI
- OXK AGGLUTINATION (WEIL FELIX) - POSITIVE (1:80)
- DENGUE NS 1 - NEGATIVE
- LEPTOSPIRAEUM - NEGATIVE

**CONCLUSION**

- Co-infections should be taken into consideration particularly when fever or symptoms persist despite adequate therapy for a previously identified microorganism or if uncommon complications arise.
- Cases of typhoid and typhus co-infection reported are very few.
- The absence of any other underlying cause for the cholelithiasis like, viral hepatitis medication and prompt response to treatment suggests that the cholelithiasis was indeed due to typhoid fever.

To,

Shubhangi S. Dere, Dr Pradip Savardekar, Dr Abhishek Gupta, Dr Rakesh Ghildiyal

**Subject: Acceptance of Abstract for the 26th National Conference of Indian Association for Social Psychiatry (26th NCIASP)**

Greetings from 26th NCIASP 2019!

We would like to thank you for submitting the proposal for oral paper/poster titled **"TO STUDY EFFECTIVENESS OF TRAINING MODULE FOR AUXILIARY NURSE MIDWIVES (ANMS) TO UPGRADE THEIR KNOWLEDGE AND ATTITUDE REGARDING PERINATAL MENTAL HEALTH PROBLEMS"** authored by "Shubhangi S. Dere, Dr Pradip Savardekar, Dr Abhishek Gupta, Dr Rakesh Ghildiyal" for the NCIASP 2019. Your proposal has been assessed by the scientific committee of the 26th NCIASP and accepted for presentation in the category of oral paper/poster. We would request you to inform the co speakers in the oral paper/poster about the acceptance of the proposal. We will intimate you about the type (oral/poster), time and venue details for your presentation as soon as our scientific program is finalised. **We would also like to request you and the co speakers to register for the Conference. It is mandatory for all the speakers including proposer to register for the conference to participate/make presentation in the scientific programme. Registration for the conference is also mandatory for publishing of your abstract in the abstract book.** We would be happy to answer any queries that you may have.

Looking forward to see you in the 26th NCIASP-2019 at Bhubaneswar, Odisha!

Wish you a very Happy Festival Season!

With warm regards,

# MULLERIAN AGENESIS: AN INVISIBLE ILLNESS

Authors: Dr. Shweta Munot, Dr. M.B. Hoogar, Dr. Shilpi Sahu, Dr. Piyush Sahu  
Department of Pathology, MGM Medical College, Navi Mumbai.

## INTRODUCTION

Mullerian agenesis also known as Mayer-Rokitansky-Kuster-Hauser syndrome occurs in one among 4000-10,000 females. This case is one among the rare case of this conditions occurring in tertiary care hospital.

## CASE REPORT

11-year-old female came with complaints of fever and vague abdominal pain since 15 days. On physical examination, the girl had normal secondary sexual characters and normal mental growth for her age. On per vaginal examination, imperforate hymen was noted. Ultrasonography reveals hematometra with hematocolpus with right ovary showing simple cyst and left ovary being indiscernible. Right kidney was unremarkable and left kidney was obscured. Hymenoplasty was done which showed vaginal atresia, hence abdominal hysterectomy was done.

Figure 1

Figure 2

Figure 2 and 3: Gross specimen shows unicornate uterus(Ⓢ) measuring 7 x 3 x 3.5 cm with single ovary measuring 2.5 x 1.5 cm and single fallopian tube with multiple paratubal cysts(Ⓢ). An outpouching from lower end of cervix was seen(Ⓢ) measuring 10 x 6 x 4 cm.

Figure 3

Figure 4

Figure 4: Dilated fallopian tube lined by cuboidal to flattened epithelium

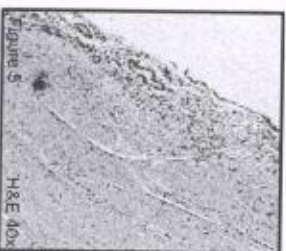

Figure 5

Figure 5: Dilated uterine cavity showing attenuated cuboidal epithelium

Figure 6

Figure 6: Ovary showing attenuated and cystic ovarian follicle with abundant stroma.

Figure 7

Figure 7: Dilated pouch-like cervix showing columnar epithelium with few endocervical glands.

## DISCUSSION

Mullerian Agnesis is caused by embryological defect in genesis of various organs which arise from mullerian duct. Patients with this conditions are evaluated for primary amenorrhoea with normal growth and pubertal pattern. The case in context highlights that mullerian duct anomalies should be considered among the differential diagnosis of cyclical abdominal pain that respond poorly to analgesics. As developmental anomalies of mullerian and urinary tracts are commonly associated, the former anomaly should be investigated conclusively before opting for elective surgery.

## CONCLUSION

The most important steps in effective management of mullerian agnesis are correct diagnosis of underlying condition, evaluation of associated congenital anomalies and counseling for psychosocial affectations arising out of such problems, in addition to treatment or intervention to address the functional effects of genital anomalies.
