## Collection of samples for Xpert Xpress Flu /RSV H1N1 Test& n-COVID 19 Testing

### 1. Laboratory confirmation of influenza

A **confirmed case** of influenza virus infection is defined as a person with an acute febrile respiratory illness with laboratory confirmed influenza virus infection by one or more of the following tests:

- **Real TimePCR**
- **Viral culture(only in the reference laboratory)**
- **Four-fold rise in influenza virus specific neutralizing antibodies(only in the reference laboratory)**

### 2. Clinical sample to be collected:

- A variety of Respiratory specimens can be collected including throat swab (or pharyngeal swab), Nasal swab, nasopharyngeal swabs, Broncho alveolar lavage, tracheal aspirates, nasopharyngeal or oropharyngeal aspirates as washes.
- In case of lower respiratory tract infection (pneumonia), and intubated patients, Broncho alveolar lavage or tracheal aspirates should be collected.
- Swab specimens should be collected only on swabs with a synthetic tip (such as polyester/Dacron/rayon/flocked Nylon swab) and mounted on aluminum or plastic shaft. **Swabs with cotton and wooden shafts are not recommended. Specimens collected with swabs made of calcium alginate are not acceptable.**
- Broncho alveolar lavage or tracheal aspirates should be collected in a sterile screw capped container in a sufficient quantity of 3-5 ml. alternatively, the sample collected in mucus extractor can also be sent.
- Sputum is not a preferred sample for influenza testing.

### 3. Time of Sample Collection

- As soon as possible preferably within 48 hours of onset of symptoms
- Preferably before antiviral medications are administered

#### 4. Bio-safety measures for sample collection

- Before initiating collection of sample appropriate PPE should be worn by the sample collector

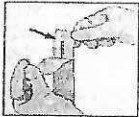

#### 5. Personal Protective Equipment

- Masks (N-95)/ triple layered surgical masks
- Gloves
- Protective eye wear (goggles) (In case there is possibility of splash)
- Protective clothing (gown or apron)

#### 6. Collection, Storage and Transport of Samples

##### Nasopharyngeal Specimen Collection

For use with Xpert® Nasopharyngeal Sample Collection Kit - Catalog # SWAB/B-100

|  |   |  |  |
|--|---|--|--|
| <p>1 Open the package that contains the swab and transport medium tube. Set the tube aside before collecting the specimen.</p> |  | <p>5 Remove the cap from the tube. Insert the swab into the transport medium.</p>  |  |
| <p>2 Open the swab wrapper and remove the swab, taking care not to touch the tip of the swab to any surface.</p>               |  | <p>6 Break the swab shaft against the side of the tube at the scoreline.</p>   |  |
| <p>3 Hold the swab in your hand, pinching in the middle of the swab shaft on the scoreline.</p>                                |  | <p>7 Replace the cap on the tube and close tightly. Specimen should be transported at 2-8 °C. Prior to testing, specimen may be stored for 24 hours at 15-30 °C or up to 7 days at 2-8 °C.</p> |  |
| <p>4 Gently insert the swab into the nostril until you touch the posterior nasopharynx. Rotate swab several times.</p>         |  |  |  |

\* SWAB/B-100 contains Copan UTM 330C and Copan nylon swab 503CS01

A better way.

#### a) Methods of Collection

- Throat swab and Nasal swab
- Nasopharyngeal swab

|  |  |
|--|--|
| MGM Medical College and Hospital's Central Hospital Lab, Kamothe, Navi Mumbai. |  |
| PRIMARY SAMPLE COLLECTION MANUAL   |  |
| Doc.No: MGM/CL/PSM/06  | Revision No & Date: 00: 03.04.2020       |
| Issue No & Date of Issue: 03.09-04-2020  |  |
| Prepared By : Quality Manager <i>P. Damodhar</i>                               | Authorised By : Lab Director <i>S.S.</i> |

### i. Throat Swab

- Easiest sample to be collected
- Have the patient open his/her mouth wide open.
- The patient should try to resist gagging and closing the mouth during sample collection
- The posterior pharyngeal wall and tonsils should be swabbed

### ii. Nasal Swab

- Insert swab into nostril along the lower floor of the nose till one reaches below the anterior turbinate.
- Leave the swab in place for a few seconds.
- Slowly remove swab while slightly rotating it. Use a different swab for the other nostril.
- Put tip of swab into vial containing VTM, breaking applicator's stick.

*Both Nasal and Throat swabs can be collected into the same VTM to increase the viral yield.*

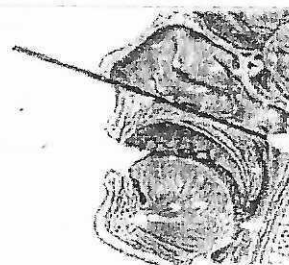

### iii. Nasopharyngeal Swab

This can be collected by two methods:

- Through the nasal route and
- Through oral route

### iv. Nasopharyngeal swab through Nasal route:-

- Insert a **thin flexible swab** into nostril and right up to nasopharynx.
- Leave the swab in place for a few seconds
- Slowly remove swab while slightly rotating it.
- Use a different swab for the other nostril.
- Put swab with tip downwards into vial containing VTM, breaking applicator's stick.
