**COURSE DESCRIPTION**

At the end of the course, the students will be able to develop an understanding of the statistical methods and apply them in conducting research studies in nursing.

**General Objectives:**

At the end of course, the students will be able to :

1. Explain the basic concepts related to statics.
2. Describe the scope of statistics in health and nursing
3. Organize tabulate and present data meaningfully.
4. Use descriptive and inferential statics to predict results.
5. Draw conclusions of the study and predict statistical significance of the results.
6. Describe vital health of the study and predict statistical significance of the results.
7. Use of statistical packages for data analysis.

**PRACTICAL EXPERIENCE GUIDELINE FOR NURSING RESEARCH:“PROJECT”**

**Guideline for research project**

**I Aim:** Students will identify the role of nurse in conducting research, writing proposal based on scientific steps and will analyze the data using statistical methods while conducting research project.

**II Objectives**

- To identify research problem areas
- To get an opportunity to select topic or problem and to formulate research proposal.
- To follow the steps in plan specific design in nursing research proposal and conducting project.
- To differentiate and plan specific design in nursing research i.e. experimental and non-experimental including methodology.
- To get an opportunity to frame/construct simple tool or questionnaire to collect data.
- To follow the basic principles of data analysis including simple tables and statistical methods for proceedings and interpretation of data.
- To be familiar to write research report to communicate the findings including bibliography, and future recommendations.
- To present nursing research report as group activity.
- To present nursing research proposal as individual activity.
- Learns to use computers.
- Recognize role of Research in quality nursing care.

**III Guide line/Check list to prepare/Nursing research proposal & project**

- 1) *Selection of research problem:* Select your interested area of research based on flat need, issues and social concern in nursing field.
  - a) State the problem – brief concise, clear.
  - b) State the purpose of selected study & topic
  - c) State objective of study/proposal/project.
  - d) State the hypothesis if necessary (Optional)
  - e) Prepare conceptual framework based on operational definition (Optional).
  - f) Write scope and delimitation of Research Proposal.

**MGM INSTITUTE OF HEALTH SCIENCES,  
KAMOTHE, NAVI MUMBAI**

(Deemed to be University)

**Grade 'A' Accredited by NAAC**

2) *Organizing for review of literature*

*AIM* a) It ass in to needs to conduct Research project

b) To Study related and relevant literature which help to decide conceptual framework and research design to be selected for your study.

c) To add specific books, bulletins, periodicals, reports, published dissertations, Encyclopedia, text books.

d) Organize literature as per operational definition.

e) To prepare summary table for review of literature.(Optional)

3) *Research Methodology*: To determine logical structure & methodology for research project

a) Decide and state approach of study i.e. experimental or non-experimental.

b) To define / find out variables to observe effects on decided items & procedure (Optional).

c) To prepare simple tool or questionnaire or observational check lost to collect data.

d) To determine sample and sampling method.

i) Mode of selection ii) Criteria iii) Size of sample iv) Plan When, Where and how data will be collected

e) To teat validity of constructed tool with experts/teachers opinion.

f) To check reliability by implementing tool before pilot study (10% of sample Size)

g) To conduct pilot study by using constructed tool for 10% selected sample size.

4) *Data Collection*: To implement prepared tool & to implement constructed tool

a) Decide location

b) Time

c) Write additional information in separate excise book to support inferences and Interpretation.

5) *Data analysis and processing presentation*

a) Use appropriate method of statistical analysis i.e. frequency and percentage.

b) Use clear frequency tables, appropriate tables, graphs, and figures.

c) Interpretation of data:

i) In relation to objectives

ii) Hypothesis (Optional)

iii) Variable of study or project (Optional)

iv) Writing concise report

**MGM INSTITUTE OF HEALTH SCIENCES,  
KAMOTHE, NAVI MUMBAI**

(Deemed to be University)

**Grade 'A' Accredited by NAAC**

6) Writing Research Report

a) Aims:

- i) To organized materials to write project report
- ii) To make comprehensive full factual information
- iii) To use appropriate languages and style of writing
- iv) To make authorities documentation by checking, references & bibliography.
- v) To use computers.

b) Points to remember

- a) Develop thinking to write research report.
- b) Divide narration of nursing research report.
- c) Use present tense and active voice
- d) Minimize use of technical languages
- e) Use simple, straight forward, clear, concise languages
- f) Use visual aids in front of able, graph and figures
- g) Treat data confidentially
- h) Review, rewrite if necessary

**NURSING EDUCATION AND STATISTICS**

## **GUIDELINES TO CRITIQUE RESEARCH STUDY**

### **1. TITLE**

- A good title suggesting key variants and the study population.

### **2. ABSTRACT**

- Clear and consider summarizing the main features of the report (problem, methods, results and conclusion)

### **3. INTRODUCTION**

#### ➤ **Statement of the problem**

- The problem stated is unambiguous and easy to identify
- The problem has significance for nursing
- There is a good match between the research problem and the paradigm and methods used, An appropriate quantitative approach

#### ➤ **Hypotheses or research questions**

- Research questions and / or hypotheses are explicitly stated, if not their absence should be justified
- Questions and hypotheses are appropriately worded, with clear specification of key variables and the study population
- The questions and hypotheses are consistent with the literature review and the conceptual framework.

#### ➤ **Literature review**

- The literature review is up to date and based mainly on primary sources.
- The reviews provides the state of the art synthesis of evidence on the research problem
- The Literature review provided a solid basis for the new study
- **Conceptual / theoretical framework**
- Key concepts are adequately defined conceptually
- There is a conceptual theoretical frame work, rationale and / or map, and it is appropriate

### **4. METHOD**

#### ➤ **Protection of participant's rights**

- Appropriate procedures are used to safeguard the rights of the study participants and the study subject to external review.
- The study is designed to minimize the risks and maximize benefits to the participants

#### ➤ **Research design**

- The most rigorous possible design to be used, given the purpose of the research
- Appropriate comparison are made to enhance
- internal and external validity of the study e.g.(is blinding used, is attrition minimized)

#### ➤ **Population and sample**

- The Population is identified and described and the sample is described in sufficient details
- The best possible sampling design is used to enhance the sample's representativeness and the sample biases are minimized
- The sample size is adequate and a power analysis is used to estimate the sample size needs

# **MGM INSTITUTE OF HEALTH SCIENCES, KAMOTHE, NAVI MUMBAI**

(Deemed to be University)

**Grade 'A' Accredited by NAAC**

## ➤ **Data Collection and measurement**

- The operational and conceptual definitions are congruent
- Key variables are operationalized using the best possible method e.g.(interviews, observations) with adequate justification
- The specific instruments are adequately described and they are good choices given the study purpose and study population
- The report provides evidence that the data collection methods yield data that high on reliability and validity

## ➤ **Procedures**

- The intervention if present is adequately described and is properly implemented. The participants allocated to the group actually receive the intervention
- The data is collected in a manner that is minimizes bias. The staff who collects the data is well trained

## **5. RESULTS**

### **Data Analysis**

- Analysis is undertaken to address each research question or test each hypothesis
- Appropriate statistical methods is used, given the level of the measurements of the variable, number of group being compared and so on.
- Type I and Type II errors are avoided or minimized

### ➤ **Findings**

- The findings are adequately summarized with good use of tables and figures.
- Findings are reported in a manner that facilitates a meta analysis, and with sufficient information needed for evidence based practice

## **6. Discussion**

### ➤ **Interpretation of the findings**

- All major findings are interpreted and discussed within the prior research and or the study's conceptual framework
- The interpretations are consistent with the results and with study's limitations
- The report address the issue of generalizability of the findings

## **7. Global Issues**

### ➤ **Presentation**

- The report is well written, well organized and sufficiently detailed for critical analysis
- The report is written in a manner that makes the findings accessible to practicing nurses

### ➤ **Researcher credibility**

- The researchers clinical, substantive, or methodological qualifications and experience enhance confidence in their findings and their interpretation

### ➤ **Summery assessment**

- The study findings appear to be valid, despite any identified limitations. There is confidence in the truth value of the results
- The study contributes meaningful evidence that can be used in nursing practice or that is useful to the nursing discipline.
